LUSTERITE

REVOLUTIONARY SURFACE PROTECTION

A LIQUIGUARD® Product
Protection Without Pollution

LUSTERITE, is a nano particle material and represents an exciting technology in polymer coatings. Formulations based on this type of material deliver a high level of perfomance with extremely thin film cross sections. This has a significant effect on visual appearance and physical properties, as they demonstrate outstanding flow and leveling and surface aesthetics. **LUSTERITE** has a higher saturation level than conventional polymers, enhancing adhesion, and dries to a smooth and even film.

LUSTERITE is an ideal coating to protect and enhance metal art, objects, door handles, trims and fittings around the home and office. **LUSTERITE** will rejuvenate the appearance and luster, and protect against future tarnishing, oxidation and corrosion. The coating resists fingerprints and helps with general maintenance. The excellent scratch, abrasion and chemical resistance will also prevent long term disfigurement. **LUSTERITE** coatings are hard and tough and can be used for indoor and outdoor applications.

LUSTERITE is a single component solvent based formulation. It's fine particle size and low water like viscosity make it extremely easy to apply. While almost all conventional methods of paint application may be used, it is faster and economical to apply with the supplied foam applicator or a microfiber cloth. Simply wipe a light coat of **LUSTERITE** on to the target surface and allow a minimum time of overnight drying. Over a 72 hour air dyring period **LUSTERITE** will achive its optimal chemical and mechanical properties. **LUSTERITE** is extremely resistant to all types of household fluids, condiments and chemicals. **LUSTERITE** has high scratch and mar resistance.

Due to the large coverage of **LUSTERITE** it is a extremely cost effective solution, and helps maintain the intrinsic value of the metal object. Substantial savings are derived by avoiding expensive replacement costs on all types of metal handles, knobs and fittings. **LUSTERITE** is offered in complete ready to use kits that include the **LUSTERITE** coating, application foam pad and work gloves. Basic kits cover an approximately twenty five square foot area. Coverage area is approximate and dependent on the complexity of the surface and application efficiency.

LUSTERITE with its unique chemistry and composition, ease of use, extensive coverage of materials and surfaces, and outstanding durability, is easily a breakthrough product and a coating of choice. **LUSTERITE** can be used on all common metals including aluminum, brass, bronze, copper, gold, platinum, silver, steel, etc. As a precaution, always try the application on an inconspicuous area before coating the entire object.
