

LIQUIGRIP

CRYSTAL CLEAR SECURE GRIP

LIQUIGRIP is a crystal clear safety coating formulated to create a non-slip grip over all types of objects around homes, businesses and industry. Its application requires nothing more than simply painting the target surface with **LIQUIGRIP** using a foam or bristle brush. Allow the coating to dry for several hours, preferably overnight if possible. Depending on the use of the treated surface the coating will provide non-slip service for a year or longer. Rejuvenating the better grip feature is simply a matter of applying a fresh coat. **LIQUIGRIP** is available in a 6 oz. and 12 oz. spray cans and is also available in bulk sizes.

LIQUIGRIP is ideal for application to grab bars in bathrooms and showers, pool ladders, walkers, safety rails, etc. The applications of this handy and easy to use product are unlimited. It can be applied to all types of materials including metal, wood, glass, plastic and composite surfaces. Due to its 'paint-on', 'spray-on' nature, size and shape of the target object is of little concern. **LIQUIGRIP** eliminates the need for textured rails and grab bars that can be rough on the hands and skin. It will also help smooth the surface of existing textured grab bars.

LIQUIGRIP is a clear coating that dries to a clear and glossy finish. The object to be coated should be free of dirt, debris, oil and grease type contaminants prior to application. Use regular masking tape on areas to be protected from the coating. Depending on the environment of the object being protected, such as bathtubs, showers, etc., more than one coat may be necessary to obtain the desired performance.

The cured **LIQUIGRIP** has a rubberized finish and will provide an excellent non-slip grip in wet and dry conditions. It bonds tenaciously and will not easily rip or peel off from the surface. When cleaning **LIQUIGRIP** nothing more than a mild detergent is recommended. Avoid the use of scouring pads and other harsh materials as they can damage the coating and reduce its performance and useful life.

LIQUIGRIP has a broad base of application including homes, healthcare environments, restaurants, boats, gyms, workshops, sports and athletics. Use **LIQUIGRIP** anywhere a firm and secure grip is essential for a better handling, safety and accident prevention. In commercial environments it is a quick and inexpensive way to reduce liability. The crystal clear coating is almost invisible and will not compromise the aesthetics of the object being coated. It can be easily removed with a rag soaked in isopropyl alcohol (rubbing alcohol) available at all pharmacies. The cleaned surface will revert to its original appearance.

IMPORTANT: *LiquiGrip is formulated as an aid to provide a secure grip and should be used accordingly. Rough use and handling and other misuse may damage the coating. If this occurs it is best to remove the damaged coating and apply a fresh coat after proper cleaning of the target surface.*
